FLYRANK AI FLUENCY TRACK • WEEK 3 DELIVERABLE

The Through-Line: Content Map & Portfolio Claim

Author: Masoom Sakina
Date: August 17, 2026
Track / Lane: AI Fluency / Machine Learning & Data Science

1. The One-Line Claim

The single sentence a visitor should remember, stating the technical proof and value provided:

> ***"I engineer scalable machine learning pipelines and explainable ensemble frameworks to detect anomalies and forecast market trajectories."***

2. The Content Map

This architecture ensures the strongest technical proof is prioritized, funneling evaluators toward the primary action: Booking a Technical Interview.

Page 1: Home / Hero

Section 1 (Hero): The sharpened one-line claim, personal headshot, and brief context (currently completing BS Data Science studies at Emerson University).

`[View ML Case Studies] → Routes to Page 2`

Page 2: Case Studies (The Proof)

Section 1 (Strongest Lead): Explainable Ensemble Learning Framework for Adaptive Financial Market Prediction.

- **Focus:** Quantitative trading algorithms, time-series forecasting, and SHAP-based model explainability.
- `[Inspect Model Architecture & SHAP Plots]`

Section 2 (Secondary Lead): Organic Traffic Decay Anomaly Classifier (FlyRank Internship).

- **Focus:** Random Forest pipeline, strict target leakage prevention, GroupKFold validation, and action playbook.
- `[Review Deployed Capstone Report]`

Section 3 (Infrastructure): Scikit-Learn Data Contract & Signal Audit Pipeline.

- **Focus:** Robust tabular data validation, custom Python exception handling, and automated schema drift alerts.
- `[View Validation Code Snippets]`

Page 3: My Method (About)

Section 1 (Technical Philosophy): Prioritizing model explainability, rigorous out-of-domain validation, and leak-free feature engineering over inflated accuracy metrics.

`[Let's Talk Machine Learning] → Routes to Page 4`

Page 4: Contact (The Core Action)

Section 1 (Availability & Reach): Note balancing pending university projects with readiness for upcoming data science internships. Links to GitHub and LinkedIn.

`[Book a Technical Interview] → Routes to Calendly or mailto: link`

3. "Still Need to Gather" List

- **Visual Proof:** High-resolution exports of the SHAP feature importance summary plots from the Financial Market Prediction ensemble framework.
- **Code Assets:** Clean, sanitized Python snippets of the `DataContractValidator` class to embed directly into the HTML portfolio.
- **Live Links:** The finalized, public URL for the deployed FlyRank anomaly detection capstone report.
- **Documentation:** A final, proofread PDF export of the technical resume to link in the "My Method" section.
- **Logistics:** A configured Calendly link (or formatted email template) connected to the `[Book a Technical Interview]` buttons.
