

FlyRank AI Internship — Week 1: Draw the Path (Portfolio Sitemap + Toolkit)

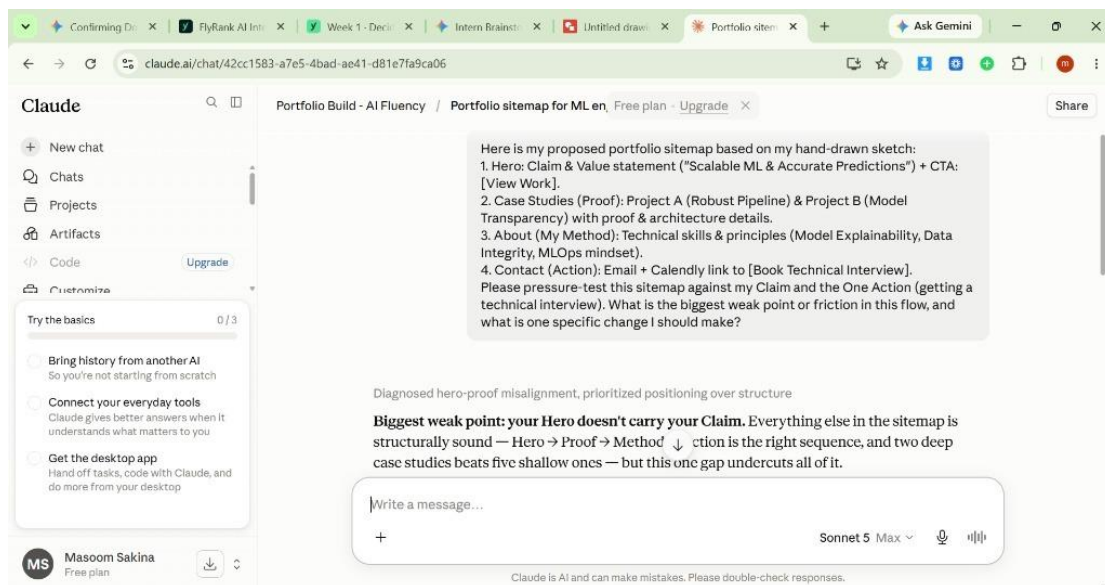

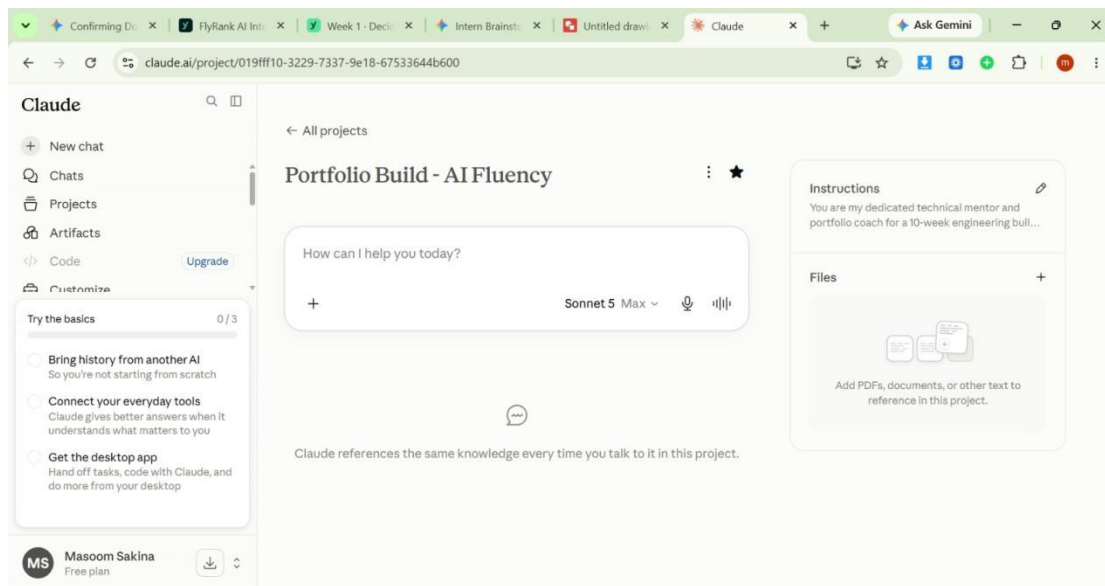

- **The One-Line Why:**

Convince a technical lead/hiring manager that I build reliable, explainable machine learning systems so they reach out to book a technical interview.

- **Proof Statement:**

I build explainable machine learning pipelines and predictive models that transform complex, high-noise data into reliable decision-making systems.

What I Learned & Will Change (Pass / Revise Requirement)

Key Takeaway from Pressure-Test:

Claude identified a critical positioning gap: my original Hero headline ("*Scalable ML & Accurate Predictions*") drifted into generic buzzwords and dropped the core differentiator ("*Explainability*").

The Specific Change:

I am revising the Hero section headline and subhead to strictly mirror my Proof Statement:

New Headline: *"Explainable ML for Decisions You Can Trust"*

New Subhead: *"Predictive pipelines that turn complex, messy data into transparent, production-ready decision systems."*

This change ensures technical reviewers immediately understand my specific focus area (interpretability and robust modeling) within the first 5 seconds, setting up direct expectations for my case studies.
