

Draw the Path: Portfolio Sitemap + Toolkit Setup

Author: Masoom Sakina

Track / Lane: AI Fluency / Machine Learning & Data Science

Project: Portfolio Build - AI Fluency

1. Portfolio Sitemap & Path to Action (Hand-Drawn Architecture)

The Core Claim: Scalable ML & Accurate Predictions through robust data pipelines, model transparency, and leak-free validation.

Target Audience & The One Action: Technical hiring managers / ML leads. *Action:* Book a Technical Interview via Calendly / Email.

Section	Proposed Structure	Why It Earns Its Place
Hero	Claim + Value Statement + [View Work]	Immediately hooks the technical evaluator with a clear value proposition.
Case Studies (Proof)	Project A (Pipeline) & Project B (Transparency)	Provides deep technical evidence through two real, leak-free builds.
About (My Method)	Explainability, Integrity, MLOps mindset	Contextualizes the engineering rigor and governance behind the models.
Contact (Action)	Email + Calendly [Book Technical Interview]	Single clear CTA with zero friction to convert visitors into interviews.

2. Configured Claude Project Custom Instructions (Setup Evidence)

Project Name: Portfolio Build - AI Fluency
Custom Instructions:
You are my dedicated technical mentor and portfolio coach for a 10-week engineering build in the FlyRank AI Fluency track.
Standing Proof Statement: "I engineer scalable machine learning pipelines with verifiable data contracts and model explainability, bridging the gap between raw financial/search data and actionable decision-support systems."
Standing Role: Pressure-test every sitemap, prompt, and architectural decision; ensure alignment toward booking a technical interview.

Figure 1: Configured Claude Project ("Portfolio Build - AI Fluency") with active custom instructions.

3. Real Pressure-Test: Prompt, Output & Screenshot Evidence

Figure 2: Real Claude session pressure-testing the portfolio sitemap against the core claim and action.

The One Specific Change Noted & Implemented Based on Critique:

Refined the Hero Claim: Replaced the generic headline "Scalable ML & Accurate Predictions" with a concrete proof-backed claim: "Leak-Free ML Pipelines & Explainable Anomaly Detection That Content & Financial Teams Trust." This directly sets up the two case studies and gives the hiring manager an immediate, compelling reason to click [Book Technical Interview].
