

Kill your darlings: Curate Your Images

Author: Masoom Sakina

Track: General AI Fluency (Week 3)

1. The Final Image Set (The Keepers)

Personal Headshot REAL CAPTURE

Where it goes: "About Me" / Hero Section.

Why: The brief mandates a real photo for anything representing the person. A professional, well-lit photo establishes immediate trust that AI avatars cannot replicate.

Scikit-Learn Data Contract Validator Receipt REAL CAPTURE

Where it goes: Project Case Study (Tabular ML Pipeline).

Why: A clean, cropped screenshot of the Python code snippet and the markdown audit table (showing the 5% null missingness alert). Real code and terminal outputs prove actual technical execution. An AI mockup of code would look inauthentic to hiring managers.

Financial Market Prediction SHAP Plot REAL CAPTURE

Where it goes: "Explainable Ensemble Learning Framework for Adaptive Financial Market Prediction" Project Section.

Why: A high-resolution export of the actual SHAP feature importance summary plot from the model. Using a real artifact validates the "explainable" aspect of the ensemble framework, whereas an AI-generated chart would contain hallucinated axes or nonsense data points.

Hero Section Abstract Texture AI GENERATED

Where it goes: Background connective tissue for the site header.

Why: Generated a subtle, low-contrast geometric data mesh in deep navy (#1E3A8A) to match the Identity Kit palette. It provides visual interest and sets an analytical mood without distracting from the real content.

2. Ruthless Curation (The Rejection Note)

Rejected Image: "Glowing Neural Network Brain" (AI Generated)

"I initially prompted an AI to generate a cover image for my ensemble learning project, and it produced a highly detailed, glowing neon-blue brain made of circuits. I rejected it because it felt like a generic, sci-fi trope. My portfolio is focused on grounded, mathematical time-series forecasting and rigorous tabular data engineering. The glowing brain competed with the actual data visualizations and contradicted the clean, analytical mood of my Identity Kit. I chose to use a real SHAP summary plot instead because it serves as actual proof of work."
